Performance

Historical Performance

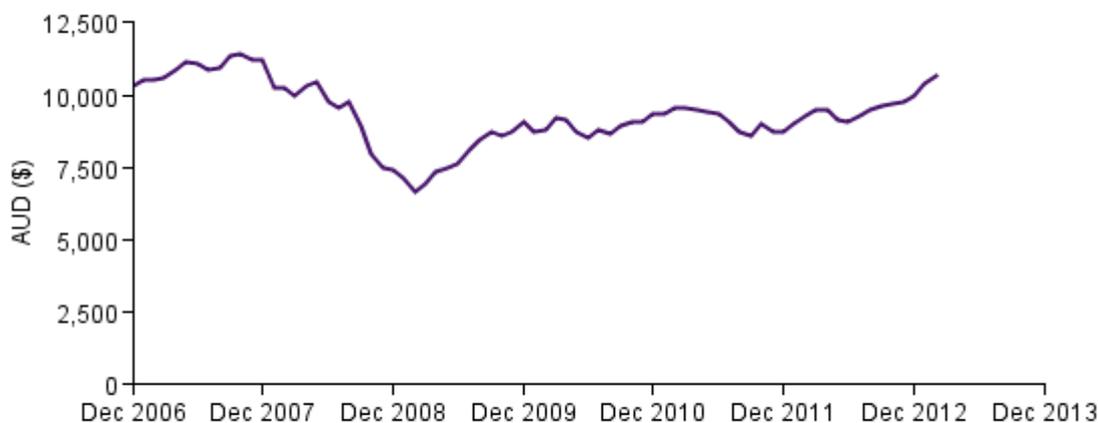

Absolute Fund Returns as at 28 Feb 2013

Returns for periods one year or greater are calculated on an annualised basis. All returns are calculated using end of month redemption prices assuming all distributions are reinvested and are net of management fees which include administration fees, issuer fees and investment fees and prior to tax considerations, and do not allow for initial entry fees.

The returns outlined above represent historical performance only and is not an indication of future performance. The value of an investment may rise or fall with changes in the market. Returns are calculated in accordance with FSC Standard No 6.

Commentaries

Fund Commentary

As at 31 January 2013

The portfolio produced a return of 7.9% (before fees and tax) over the quarter to 31 January 2013.

We actively manage our portfolios and work constantly to improve them. In September, we began to introduce a new Low Correlation Strategy in the portfolio. The strategy is a fund of hedge funds managed by MLCs Alternative Strategies Team. There are currently three managers in the strategy: Bridgewater, Nephila and Balestra Capital. In November we increased Bridgewater's allocation in the strategy to take advantage of a limited opportunity to invest in another one of their hedge funds.

In December we announced changes to the managers in our Australian shares strategy. We:

- appointed three new managers: Alphinity, Antares Equities and Vinva
- retained current managers JCP, Northcape and Vanguard, and
- removed the other current managers of the strategy.

The strategy should make a more consistent contribution to the overall reliability of returns in the portfolio.

Asset class returns

The drivers of returns in each asset class are outlined below:

Fund Snapshot

MLC Horizon 6 - Share Portfolio

Fund Snapshot

MLC Horizon 6 - Share Portfolio

Asset Class	Target Allocation	Comment
Global shares	43.5%	<p>Investors continued to earn strong returns from global returns during the three months to the end of January. The global shares strategy (unhedged) returned 8.3% (before fees and tax), outperforming the benchmark by 0.5%.</p> <p>The hedged global shares strategy was even stronger because the Australian dollar rose over the quarter. The strategy returned 9.8% (before fees and tax), outperforming its benchmark by 0.1%.</p> <p>Good stock selection within Information Technology was a key driver of performance. Allocation to Utilities and Materials companies also helped. Holdings that contributed to returns during the quarter included Information Technology company Apple, global oil and gas company Exxon Mobil and Dutch electronics components maker ASML Holdings.</p> <p>Underweight exposure to cyclical sectors, such as Financials, detracted from returns to investors.</p> <p>All the managers in the strategy earned positive returns for the quarter. Dimensional and Sands Capital were the standout managers, due both to markets rising on higher growth expectations and good company selection. Mondrian underperformed the market, mainly due to a low allocation to the strong Financial sector and a fall in price of German pharmaceutical company Merck & Co.</p>
Defensive global shares	2%	<p>The defensive global shares strategy, managed by IVA, aims to preserve investors capital over the short term, while producing a return similar to the global share market over the medium term. The manager isn't limited to global shares, but can also invest in cash, bonds and gold.</p> <p>During the quarter ended 31 January 2013, the manager trimmed exposure to high quality companies after price increases, and re-allocated to cash and bonds. This transition increased the cash and bond exposure to approximately 40% of the strategy. The rest is invested in shares.</p> <p>The strategy produced a return of 5.3% (before fees and tax) over the quarter.</p>
Global private assets (hedged)	7%	<p>Global private assets produced a return of 2.3% (before fees and tax) over the quarter to 31 January 2013. This result was driven by investments across all strategies and regions. MLC has recently invested in three funds:</p> <ul style="list-style-type: none"> • ABRY Senior Equity IV, a fund managed by ABRY Partners • NorthEdge I, a spinout from Lloyds that focuses on opportunities in the north of England, and • RRJ II, which focuses on Asian opportunities. <p>We also made two recent co-investments: in Philadelphia Solutions, which owns a large US East Coast oil refinery, and with KKR Special Situations and Allegro in a portfolio of Australian debt positions.</p> <p>Private assets are unlisted and valuations are usually three to six months behind listed markets. That's why returns from private assets have been much lower than those from the strongly rallying share markets.</p>
Australian shares	41%	<p>The Australian share market continued to deliver pleasing returns in the quarter to 31 January. Over the quarter, the Australian shares strategy returned 9.0% (before fees and tax), which was in-line with the market benchmark.</p> <p>Holdings that contributed to returns this quarter included News Corporation, Rio Tinto, Downer EDI and Fairfax Media.</p> <p>The main sector positions in the strategy at the end of the quarter included underweight Financials, Consumer Staples, Materials and Utilities and overweight Consumer Discretionary, Energy and Information Technology.</p>
Long-Term Absolute Return Strategy	4%	<p>The strategy returned 5.6% (before fees and tax) in the quarter to 31 January. LTAR has significant exposure to non-traditional investments and strategies. These strategies help diversify the portfolio, providing a return stream that is expected to have low correlation with returns from core asset classes and a focus on absolute returns. This quarter, all the non-traditional strategies in the portfolio and the traditional asset classes delivered positive absolute returns.</p> <p>Key contributors to performance this quarter were:</p> <ul style="list-style-type: none"> • global and Australian shares: returns from these share strategies ranged from 6.5% to 9.0% for the quarter (before fees and tax) • the emerging markets strategy, which returned 5.9% (before fees and tax), and • the multi-asset real return strategy, which returned 5.3% (before fees and tax).
Global property securities (hedged)	2%	<p>The global property securities strategy produced a hedged return of 10.4% (before fees and tax) in the quarter to 31 January. This was 0.4% above the 10.0% return of the strategy's market benchmark.</p> <p>Real estate investment trust (REIT) markets performed well in the quarter. Japan's market surged upwards as investors favored property developers in response to the new Prime Ministers commitment to stimulate the economy through spending and monetary expansion. All other REIT market returns were positive, but considerably below Japan's. Strong returns reflect the gradual recovery in property market conditions since the global financial crisis. The funds managers have observed that the operating environment for real estate remains positive in most markets.</p>

Fund Snapshot

MLC Horizon 6 - Share Portfolio

Low Correlation Strategy	0.5%	The Low Correlation Strategy is a fund of hedge funds aiming to deliver returns that are mostly independent of share market performance. The managers in this strategy may invest outside traditional asset classes, and will manage their investments using an unconventional absolute return approach. Over the quarter, the strategy produced a positive return of 1.5% (before fees and tax). The strategys correlation with share markets continued to be low, and underlying strategies remained uncorrelated to one another.

- Please refer to the Market commentary for an overview of what happened in domestic and global markets over the quarter.
- Fund commentary for this fund will be updated two to three weeks after the end of the month

Market Commentary

As at 31 January 2013

Share market investors continued to enjoy very strong returns during the last three months. Australian shares have outperformed global markets in the quarter and over the 12 months. Fixed income investors have enjoyed solid performance over the past few years as lower bond yields have boosted returns. However, those returns have moderated more recently, as bond yields rose from their historic lows of 2012.

Periods to end January 2013	3 mths	1yr	2yr	3yr	5yr	10yr
Cash	0.8	3.8	4.4	4.5	4.9	5.4
Australian bonds	0.0	7.3	8.9	7.8	8.0	6.3
Global investment grade bonds (hedged)	0.8	7.9	9.9	9.2	8.9	7.9
A-REITs	6.0	31.7	15.6	11.9	-4.7	2.9
Global REITs (hedged)	10.0	28.1	15.3	20.5	4.3	na
Australian shares	9.0	20.1	6.2	6.9	1.6	9.8
Global shares (hedged)	9.7	19.5	9.2	12.8	3.7	10.4
Global shares (unhedged)	7.8	17.7	3.5	4.7	-1.1	3.3
Emerging markets equities (unhedged)	7.1	10.0	-1.7	1.9	-0.8	10.5

Listed real estate assets have enjoyed extraordinary gains over the past year. The higher yields that were offered on these securities proved extremely attractive to investors. However, the longer term returns from these assets are still disappointing, which reflects their extremely poor performance during the worst of the global financial crisis.

Over recent months, unhedged global share returns have again lagged those of hedged global shares. The strength of the Australian dollar in the last few years has resulted in hedged global shares outperforming unhedged global shares over all the time periods shown in the table. However, the difference in returns has narrowed, as the Australian dollars gains against the major currencies have abated.

Efforts by the worlds major central banks in particular, the US Federal Reserve, the European Central Bank and the Bank of Japan to inject liquidity into financial markets are having an ongoing and positive impact on market sentiment. In addition, world share prices have climbed and key surveys and other forward-looking economic data suggest the world economy is continuing to improve. That improvement has been seen in all major regions of the world including, perhaps surprisingly, the eurozone. Despite this improvement, much of the eurozone remains in recession. Economic conditions on the European periphery are still catastrophic.

The US has largely avoided the much-feared fiscal cliff, the automatic and massive tightening of fiscal policy that was due to take effect at the start of the year. The US private sector seemed to be gaining some momentum ahead of the fiscal cliff, despite an unexpected defence-led decline in overall US GDP in the final quarter of 2012. However, US budget developments remain a source of uncertainty for the US economic outlook. Planned spending cuts that are due to take effect over the coming months could also reduce US economic growth.

The improvement in the major economies does augur well for the prospects of the trade-dependent economies in the emerging world. In China, leading indicators are improving and the economy appears to be accelerating. A better global economy should support exports and domestic demand should respond to policy initiatives.

Stronger share markets and an improvement in global growth are welcome. Still, global growth continues to be hampered by high levels of private sector debt in a range of countries, and policy makers inability or unwillingness to stimulate growth (particularly, but far from exclusively, in Europe). Austerity measures in much of the eurozone and the UK designed to rein in fiscal deficits and stabilise public debt have achieved neither aim: tighter fiscal policy has tended to worsen economic conditions and further undermine public finances.

Australia's economy slowed over the course of 2012, but still posted an internationally respectable 3.1% growth in output for the year to September. However, the boost to Australia's national income from the boom in our terms of trade ended in 2012. While still historically high, Australia's terms of trade has fallen by around 14% from its recent peak as prices for our key resource exports have declined. These declines, and the uncertain global environment, meant capital spending plans were wound back, particularly in the mining industry.

Concerns over Australia's growth prospects and the uncertain global environment prompted the Reserve Bank of Australia (RBA) to reduce official interest rates on four occasions during the year, taking the cash rate to its global financial crisis low of 3%. Late in 2012, Treasurer Wayne Swan announced that the government was no longer committed to achieving a surplus in the current fiscal year. A surplus would have required further fiscal tightening, which could adversely affect growth in an already uncertain economic environment.

More recently, Australia's economic data have tended to fall short of market expectations, adding to concerns about the durability of Australia's growth. December quarter inflation data were also below forecasts, which may provide further scope for the RBA to reduce interest rates from their already extremely low levels.
